Art Unit: 1742

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Lin et al. (U.S. Patent 5,735,975).

Lin et al. discloses metallic glass alloys containing various amounts of zirconium, niobium, copper, nickel and aluminum. Referring to Table 1 of Lin, the alloy located in column 7, line 18 contains amounts of these elements which approximate those defined in the instant claim. While Lin does not disclose a composition precisely matching that claimed, one of skill in the art would expect the presently claimed composition to possess substantially the same properties and utility as alloys of Lin having approximately the same composition; see *Titanium Metals v. Banner* (227 USPQ 773). Consequently, the disclosure of Lin et al. creates a prima facie case of obviousness of the presently claimed invention.

3. Claims 16-20 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-6 of U.S. Patent No. 6,592,689.

Although the conflicting claims are not identical, they are not patentably distinct from each other because both the '689 claims and the instant claims are drawn to a method of making bulk metallic glass comprising the same elements and having the same glass transition temperature ratio, and with the ratio(s) of various elements in the metallic glasses being substantially the same in both instances. While the precise limitations of the two sets of claims

Art Unit: 1742

are not identical, a substantial overlap exists therebetween. Thus, the claimed invention cannot be said to be patentably distinct from that as defined in the claims of the '689 patent.

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

5. The remainder of the art cited on the attached PTO-892 and 1449 forms is of interest.

With respect to reference "AD" on the 1449 form, this reference has been crossed out because the patent number listed does not match the patentee's name, and that patent number does not appear to be even remotely relevant to consideration of the present claims.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to George Wyszomierski whose telephone number is (571) 272-1252. The examiner can normally be reached on Monday thru Friday from 8:00 a.m. to 4:30 p.m. Eastern time.
